SIMATS ENGINEERING

Engineer to Excel

SIMATS

Saveetha Institute of Medical And Technical Sciences

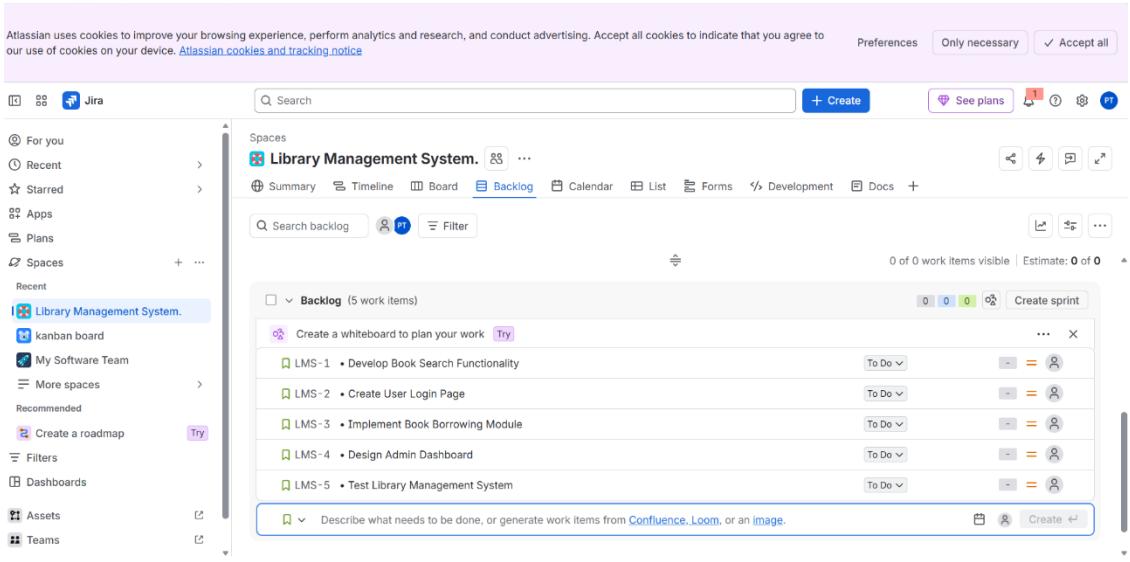

(Declared as Deemed to be University under Section 3 of UGC Act 1956)

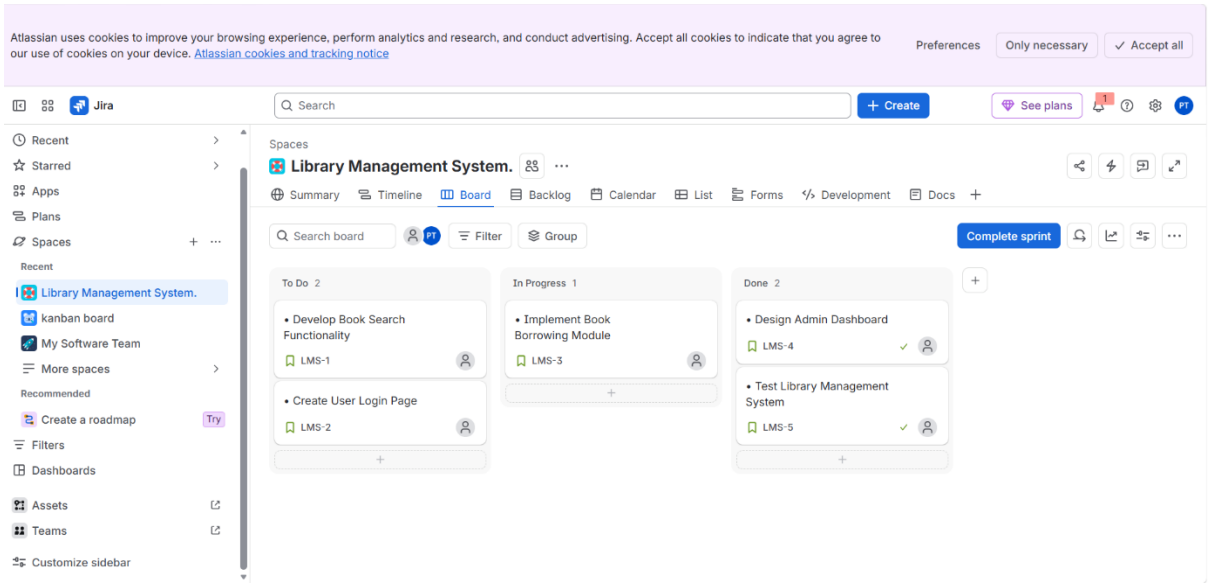

CSA1012 - Software Engineering **Name: T.Prakeerthi**

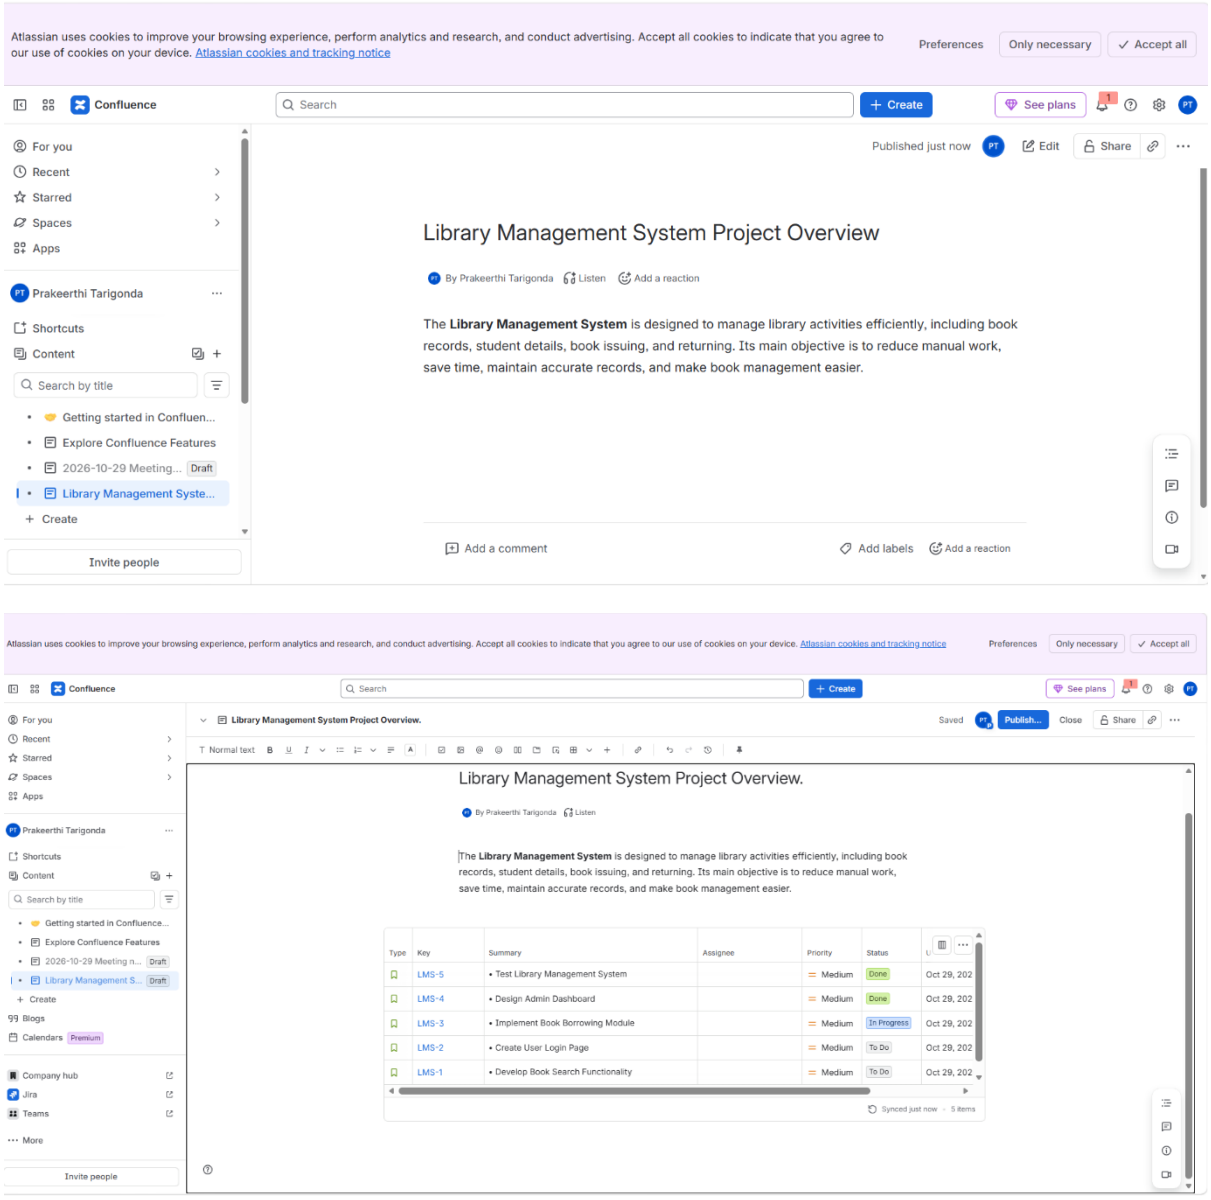

Lab Experiments **Reg.No:192524279**

Experiment 6

6. Link Jira tasks with Confluence to streamline task tracking and progress monitoring for the Library Management System development

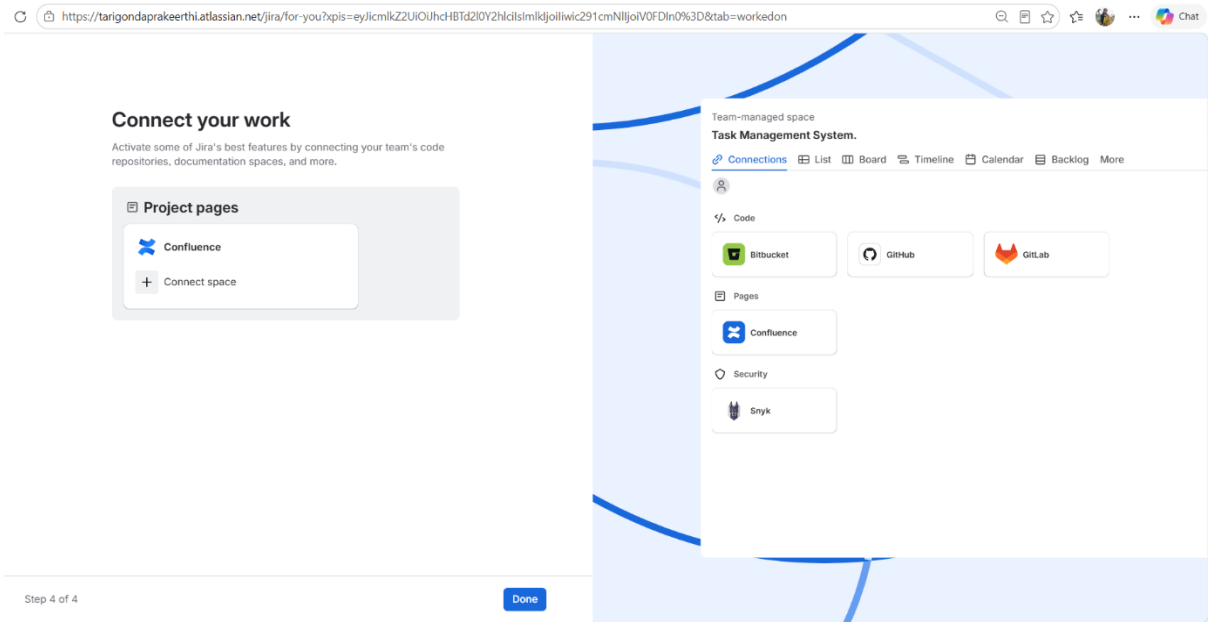

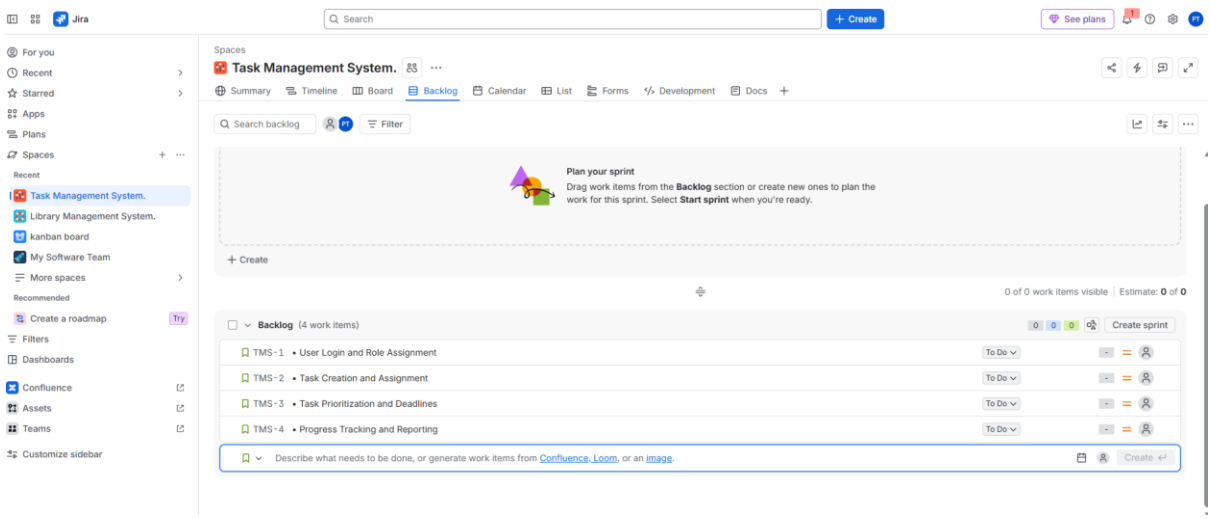

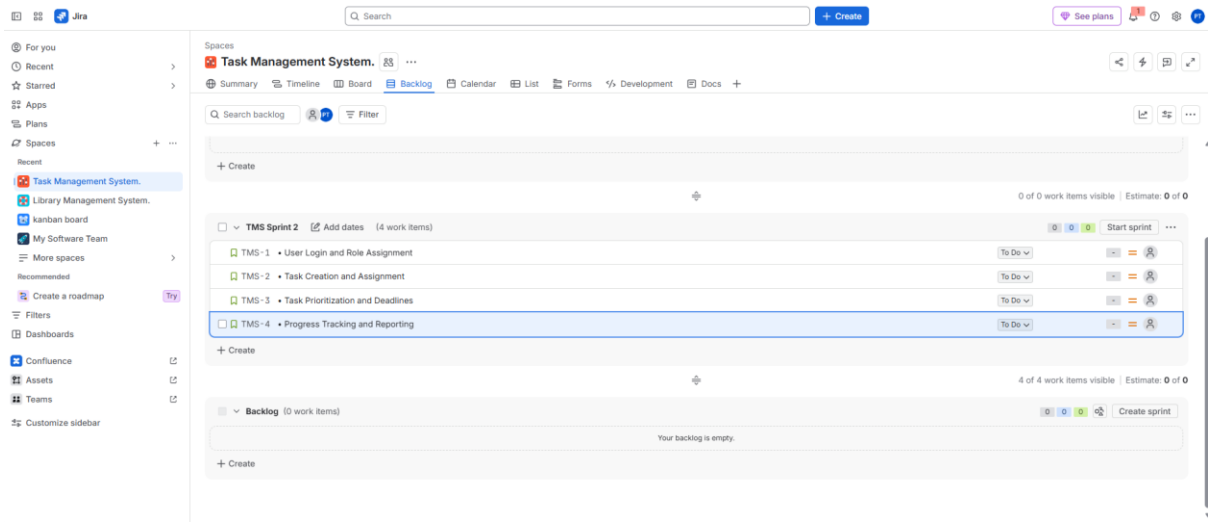

Experiment 7

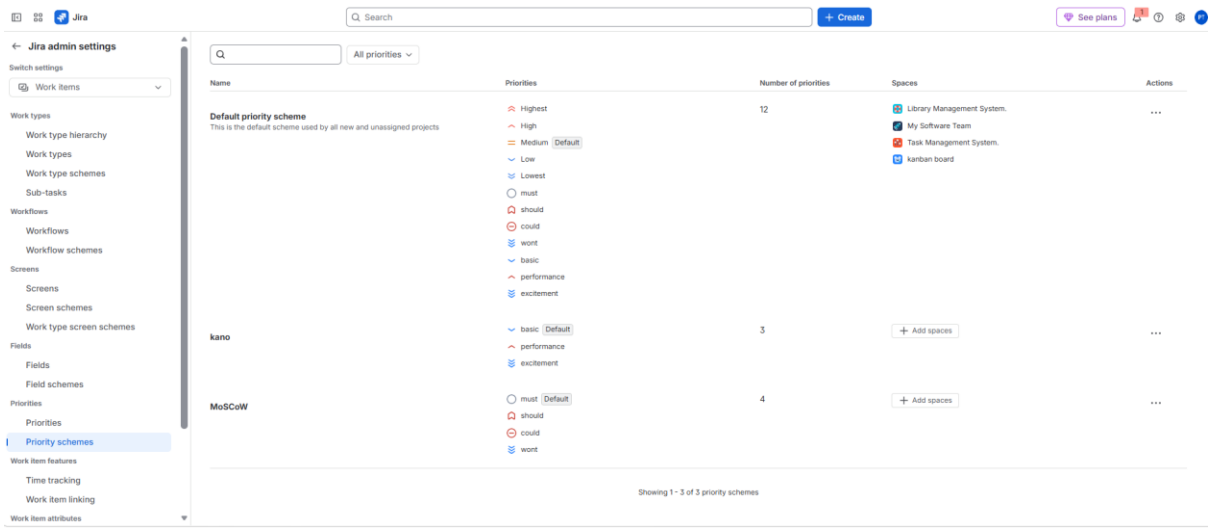

7.You are designing a Task Management System for a small team. The system should include the following features.

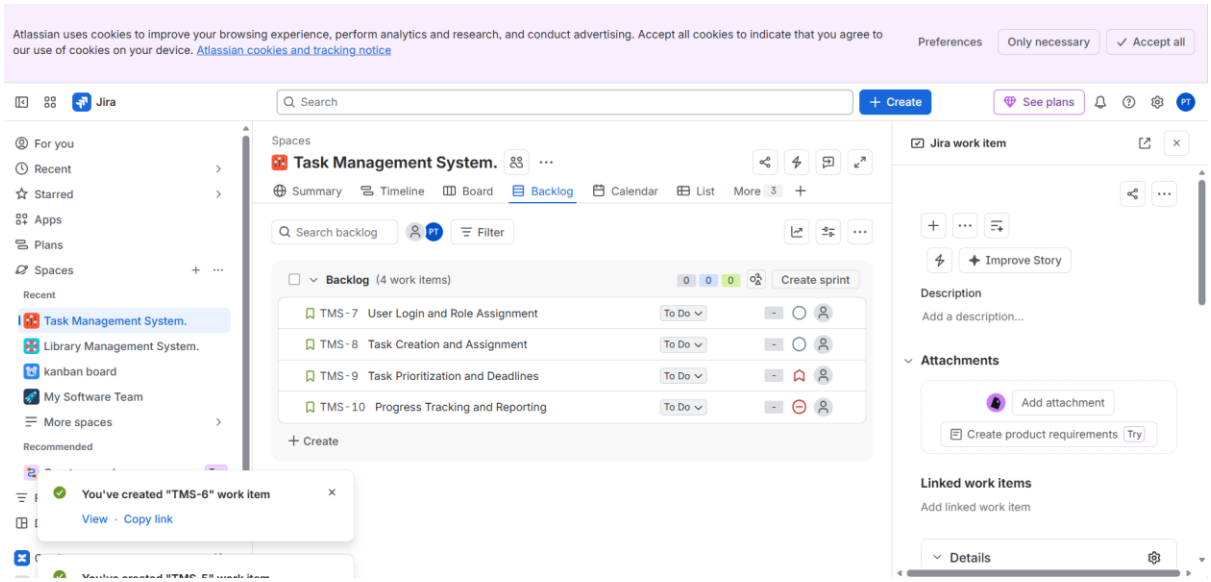

SOFTWARE ENGINEERING LAB EXPERIMENTS

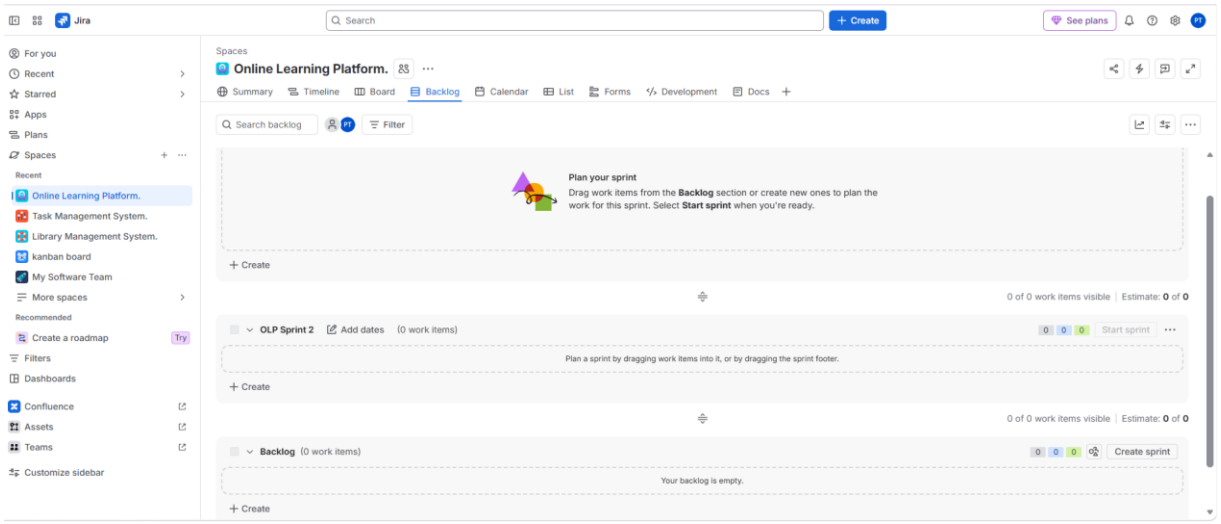

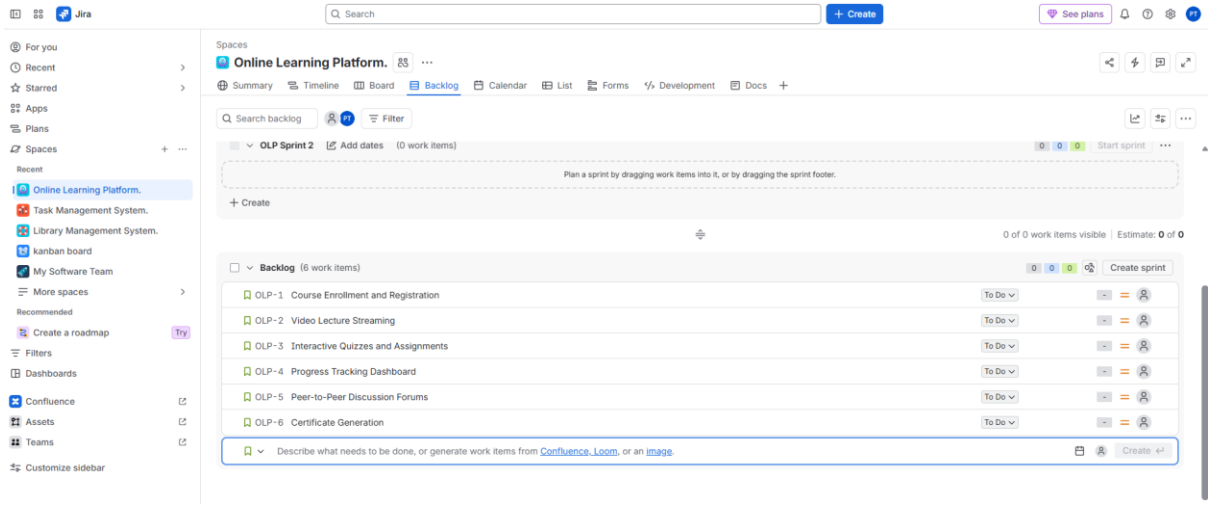

Experiment 8

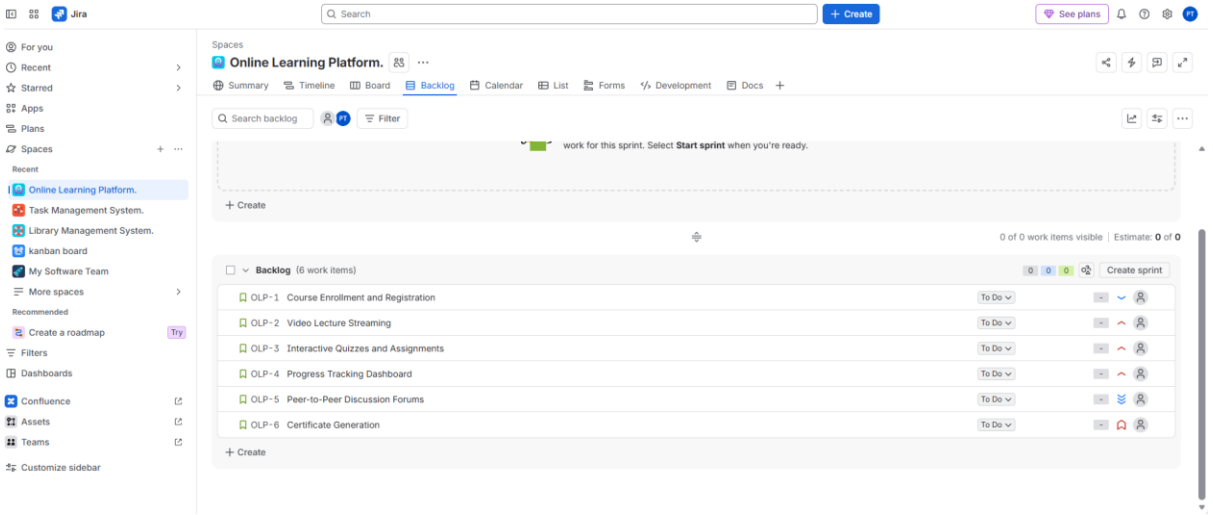

8.You are tasked with developing an online learning Platform.The Platform should include the following functionalities. Link Jira tasks with Confluence to streamline task tracking and progress monitoring for the Library Management System development.

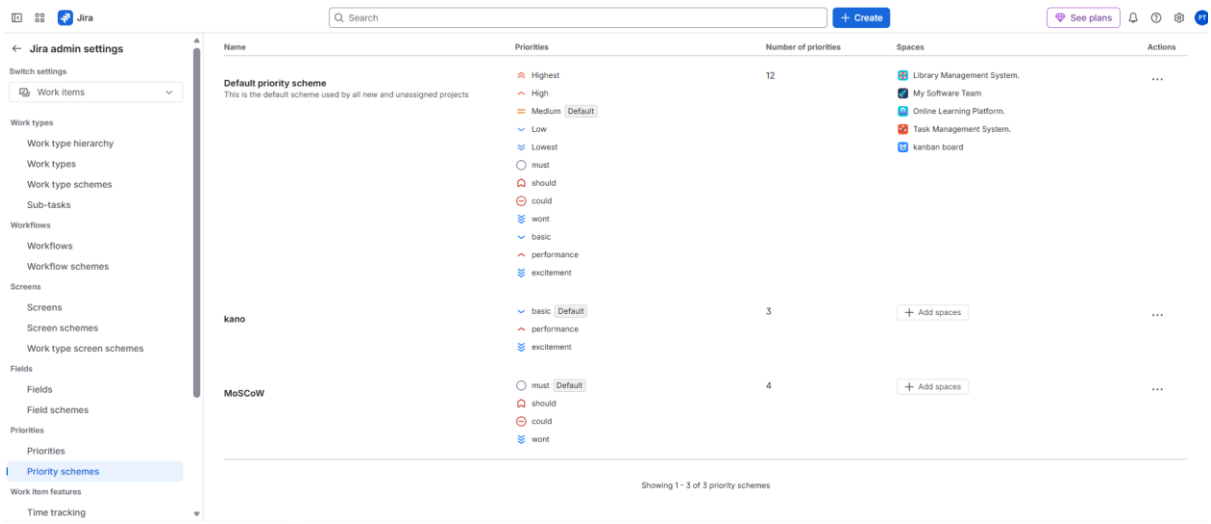

- **Create a new page in Confluence titled "Library Management System Project Overview."**
- **Embed at least 5 Jira issues related to the development of the Library Management System (e.g., tasks from the sprint like "Develop book search functionality," "Create user login page," etc.).**
- **Use the Jira macro to display issues with status (e.g., "To Do," "In Progress," "Done").**
- **Add a progress bar in the Confluence page to visually track the completion of each embedded Jira task (e.g., percentage of tasks completed in the sprint).**

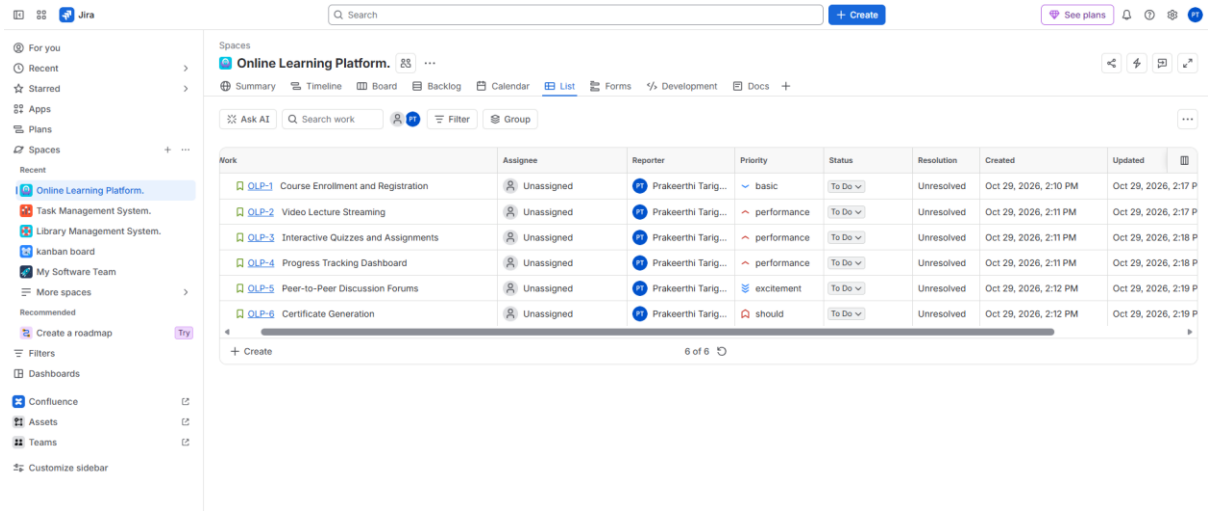

- **Submit a screenshot of the Confluence page showing the embedded Jira tasks and the progress**

Experiment 9

9.Demonstrate how to work collaboratively in Git/GitHub on a project using the for and-pull request workflow.Tasks:

1. Fork an existing public GitHub repository (e.g., a sample JavaScript or Python project).

2. Clone the forked repository to your local machine using Git.

3. Create a new branch for the feature or change you want to work on.

4. Make modifications or add new features (e.g., add a function, fix a bug, or update the README).

5. Commit your changes and push the branch to GitHub.

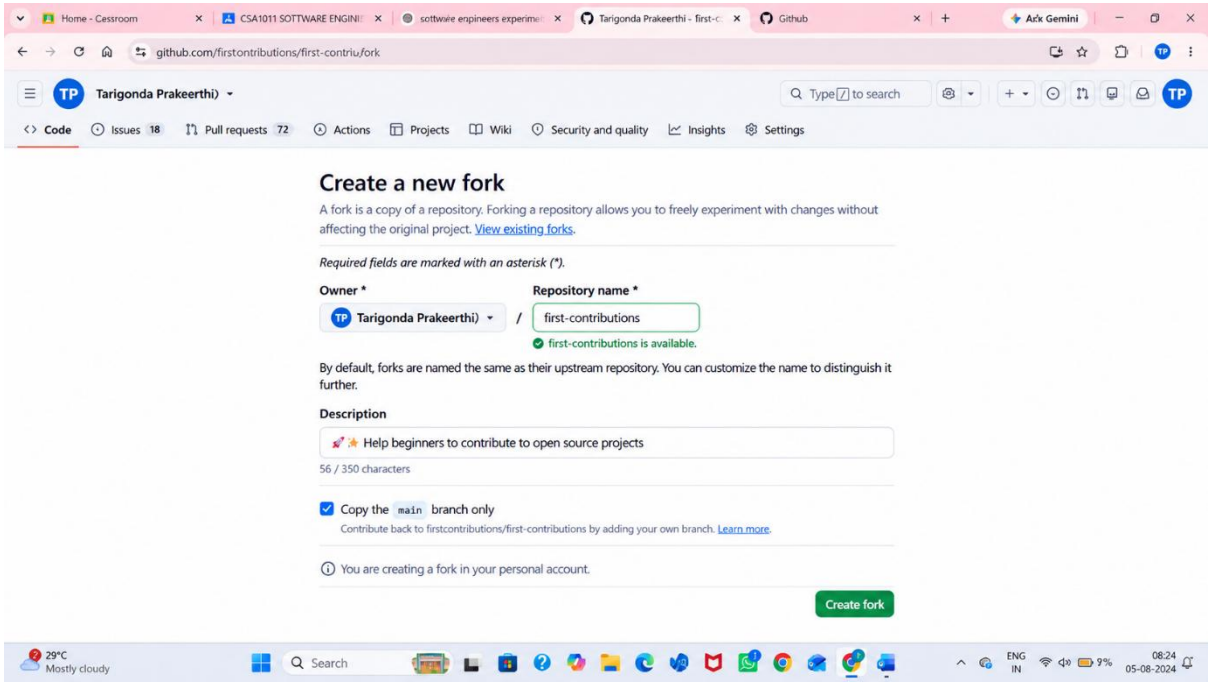

6. Go to the GitHub repository and create a pull request to merge your feature branch into the main branch.

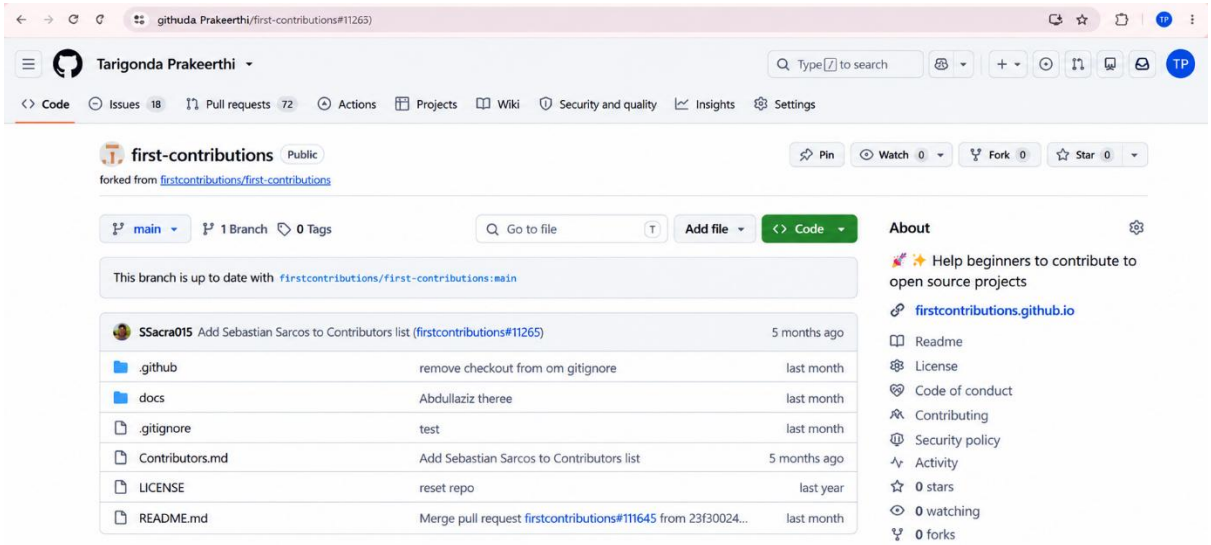

7. Review the pull request and provide feedback on the changes.

8. Respond to feedback by making additional commits to the feature branch if necessary.

9. Once the pull request is approved, merge it into the main branch.

10. Finally submit the link to the pull request along with a summary of the changes you made and how you collaborated.

```
MINGW64:/c/Users/tarigondaprakeerthi/Documents/first-contributions

tarigondaprakeerthi@LAPTOP-T1H1UU59S MINGW64 ~/Documents
$ cd Documents

tarigondaprakeerthi@LAPTOP-T1H1UU59S MINGW64 ~/Documents
$ git clone http://github.com/tarigondaprakeerthi/first-contributions.git

* update-readme
  main
tarigondaprakeerthi@LAPTOP-T1H1UU59S MINGW64 ~/Documents/first-contributions (update-readme)
$
```

Experiment 10

10.Demonstrate how to work with Git branches and resolve merge conflicts when collaborating with others. Tasks:

1. Clone a shared repository to your local machine.

2. Create a new branch and switch to it

3. Make changes to a file (e.g., update a README or modify code in a specific function).

4. Commit your changes.

5. Push the changes to the remote repository.

6. Before merging, pull the latest changes from the main branch.

7. Switch back to your feature branch.

8. Merge the main branch into your feature branch.

9. If there are conflicts, resolve them manually by editing the conflicting files. After resolving conflicts, mark the conflicts as resolved.

10. Commit the resolved merge.

11. Push your feature branch with the merged changes to GitHub and create a pull request.

12. Submit a summary of the steps you performed, the conflicts you encountered, and how you resolved them.
